Machine Learning Engineer | AI Systems & Infrastructure

SUMMARY

Machine Learning Engineer with 5+ years of experience building end-to-end AI systems, combining model development, backend engineering, and scalable cloud infrastructure. Specialized in Generative AI, agent-based architectures, and retrieval-augmented systems, with a strong focus on production-grade platforms that improve developer productivity and system reliability..

EDUCATION

Sri Shakthi Institute of Engineering and Technology
B.E. Computer Science | 2017 – 2021

SKILLS

Machine Learning & AI: Generative AI, RAG pipelines, LangChain, LangGraph, Agents, MCP, Prompt Engineering

Backend & Systems: Python, Node.js, RestAPI.

Cloud & DevOps: GCP, AWS (EC2, S3, Lambda), Terraform, Docker, CI/CD (Tekton, Cloud Build, GitHub Actions)

Databases: MongoDB, Elasticsearch, PostgreSQL

Tools: Git, Linux

EXPERIENCE

STG Infotech India – Ford Motors India
Senior Software Engineer | 2022 – Present

AI Platform for Developer Automation [Featured Work]

- Architected and implemented an agent-based system that translates natural language prompts into production-ready Terraform configurations and CI/CD pipelines
 - Implemented a RAG-based architecture to retrieve validated infrastructure patterns and enforce best practices during code generation
 - Developed multi-step agent workflows for infrastructure generation and validation (Terraform, Cloud Build, CI/CD agents, compliance checks, GitHub PR automation)
 - Integrated repository analysis to adapt generated code based on existing project structure and dependencies
 - Automated compliance checks (SonarQube, FOSSA, 42Crunch) with self-healing code modifications via pull requests
 - Reduced manual infrastructure setup effort by ~40–60% and improved deployment consistency
 - Built backend systems for session management, context tracking, and workflow orchestration using MongoDB
 - Integrated authentication (Azure SSO) and GitHub Apps for secure, scalable usage
 - Scaled platform to 450+ users; reduced deployment time by 70% and enabled 500+ automated deployment
-

MetaPix (AI Data Platform)

- Collaborated and worked on a platform to transform unstructured image/video data into structured datasets with natural search using CLIP models
 - Integrated ML workflows with tools like Voxel51, Weights & Biases, and Vertex AI pipelines
 - Deployed and scaled services on GCP-backed HPC infrastructure
 - Implemented observability and performance monitoring using Dynatrace
 - Ensured compliance with security and code quality standards (SonarQube, 42Crunch)
-

AI Notebook (Generative AI Assistant)

- Developed an AI-powered assistant for summarizing and querying complex documents (PDF, DOCX, PPTX) using source-grounded retrieval
 - Built concurrent file ingestion pipelines to support multi-user workflows
 - Integrated Gemini Text-to-Speech for audio-based summaries
-

Eunimart Multichannel Pvt Ltd, Hyderabad

Software Developer | 2021 – 2022

- Developed backend features for a Supply Chain Management platform used by global e-commerce sellers
- Managed Azure infrastructure including deployments, monitoring, and backups

Software Developer Intern | 2020 – 2021

- Built scalable data pipelines for scraping e-commerce platforms using Selenium and BeautifulSoup
- Designed asynchronous processing using RabbitMQ and PostgreSQL
- Prepared datasets for ML training (e.g., BLIP models)
- Performed API testing using Postman
